Summary

Pre-final year B.Tech candidate with hands-on experience in backend engineering and distributed systems. Independently architected and delivered full-stack projects, including a microservices-based security scanning platform. Proficient in RESTful API design, asynchronous processing, and event-driven architecture. Seeking a software engineering role to contribute to scalable, production-grade systems.

Education

Saveetha Engineering College

B.Tech – Artificial Intelligence and Data Science, CGPA: 8.16/10

Chennai, Tamil Nadu

Sep 2023 – May 2027

Technical Skills

Languages: Java, Python, SQL

APIs & Backend: REST API, Spring Boot, Microservices, Asynchronous Processing

Databases: PostgreSQL, Hibernate ORM

Web/Frontend: React, Tailwind CSS

Tools: Docker (Basics), Postman, JWT, OAuth 2.0

Computer Science Fundamentals: Data Structures & Algorithms (170+ problems solved on LeetCode), SOLID Principles, System Design

Work Experience

Retech Solutions Pvt. Ltd.

Software Engineering Intern

Dec 2024 – Jan 2025

Remote, India

- Contributed to developing and delivering Java REST API features for a live SaaS product, working alongside senior engineers throughout the Agile development lifecycle.
- Collaborated with senior engineers to design and implement a Redis caching layer, reducing API response time by 38% and gaining hands-on experience in performance optimization.
- Maintained 85%+ unit test coverage using JUnit 5 and helped resolve 3 production defects, gaining practical experience in debugging and diagnosing live application issues.

Projects

DevSecWatch / Spring Boot, FastAPI, React, RabbitMQ, PostgreSQL, Redis, Docker

2026

- Designed and built a 4-service full-stack security scanning platform independently, then reproduced and resolved integration failures across service boundaries during development
- Engineered an event-driven pipeline using RabbitMQ and Docker-sandboxed Semgrep workers, isolating failures in scan execution from the API layer to keep response times under 100ms
- Integrated an LLM-powered remediation service with a Redis-backed cache, troubleshooting cache invalidation edge cases to keep results accurate under repeated queries

PlanWizz / Spring Boot 3, Java 17, PDF Parsing, CSP Algorithms, React, Tailwind CSS

2026

- Built a Constraint Satisfaction Problem (CSP) solver handling ambiguous, inconsistently formatted PDF enrollment data as input, requiring iterative debugging against real-world edge cases
- Migrated the backend from a legacy FastAPI service to Spring Boot 3 without breaking existing scheduling logic, validating behavior at each step
- Deployed and maintained the live application on Render, independently handling post-deployment issues end to end

Achievements

Won: HackHustle 2.0 (TriNetra AI) – 2nd Prize (2026) / No Code Rush – 2nd Prize (2025)

Participated: IBM Z Datathon (2025) / Defy Hackathon (2025) / HackACure (2025)

Leadership & Recognition: Coordinated Fusion for Future Hackathon (2025), recognized as the Best Hackathon conducted – managed logistics and communication across teams and stakeholders
